### Abstract of JP 10019193 (A)

**PROBLEM TO BE SOLVED:** To provide a lubricating device that can positively feed an appropriate quantity of a lubricant to each movable part of a movable body according to the driven state of the movable body. **SOLUTION:** In this lubricating device, a container 5 stored with a lubricant, a piston pump 1 fitted to the container 5, an electric motor 30, and an eccentric cam 31 rotatory-driven by the electric motor 30 so as to actuate the piston pump 1, are accommodated in housings 3A, 3B provided near a movable part. The electric motor 30 has a power supply connected to a power terminal of a motor for driving the movable body, and rotatory-drives the eccentric cam 31 according to the operation of the motor for driving the movable body. The piston pump 1 therefore feeds the lubricant from the container 5 to a delivery port 10.
